THE PROJECT

Willmott Dixon employed us through a competitive tender process to carry out the installation in this new four storey low carbon construction of an open plan offices facility. The building was fully air conditioned on a floor by floor basis which was supplemented by an air conditioned ventilation system. Heating to the WC / stairwells and hot water were provided by a dedicated Air Source Heat Pump, all of which providing the building with a low carbon energy solution. A new link was also constructed between the existing Darlington Borough Councils Civic Centre to provide a collaborative space for both buildings end users. The services installation achieved a BREEAM excellent rating for the new facility.
